## Benefit from improved cleaning of feed grain

An investment was made in a SKIOLD Sigma grain cleaner in the spring 2020. The Sigma cleaner has four vertical round cleaning screens in which the grains rub against each other.

Mads Rauff Bjerre, Sjørup Pig Farm.

**Grain cleaning:** Rectal prolapse, brucellosis, poor feed intake and poor milking ability. Plant manager Brian Søndergaard saw these problems every time the level in a grain silo was running low. Together with co-owner Mads Rauff Bjerre he put three initiatives into practice: Three months' transition grain, new aeration bottom in both grain silos, and improved cleaning of the feed grain. These initiatives have made a difference.
